

**ABSTRACT**

The device provides a low cost, easy to use and cost-effective way to repair or connect pipe ends. The pipe coupling includes an elongated housing comprising a first end and a second end. The housing defines an elongated bore therein. A stop is located on an inner diameter of the housing. The stop is located between the first end and the second ends of the housing, wherein a distance from the stop to one of the first and second ends is at least two times a distance from the stop to the other of the first and second end of the housing. A first cylindrical bore extends from the first end to the stop and a second cylindrical bore extending from the second end to the stop, wherein an angle between the first cylindrical bore and the second cylindrical bore is about 15 degrees to about 165 degrees.
